

Mobile Phone Examiner *Plus*

Software and Tablet

The MPE+ Tablet makes in-depth mobile phone data immediately available during on-scene cell phone investigations, saving time for the examiner back at the lab. Preconfigured with MPE+ software, this sleek new tablet supports 3500+ mobile devices.

MPE+ Software

- Supports 3500+ mobile phones and smart devices
- On-the-Fly decryption of the OS and logical data on iOS devices
- SIM and USIM support, with Forensic SIM cloner
- Data carving for embedded data

Preconfigured Touch Tablet

- Instant on-site triage
- Anti-glare screen
- Multi Touch 10.1" Capacitive Screen
- Intel ATOM Dual Core Processor
- 2Gb DDR3 SDRAM
- 16Gb SATA Solid State Drive
- 16Gb 3.0 MPE+ Tablet Flash Drive
- SD Card Slot
- Ethernet Adapter
- Windows Standard 7 Embedded x64
- 3-core Li-Ion battery with input adapter
- Cable kit available separately

MPE+ is a stand-alone mobile forensics software solution that gives you the broad capabilities of high-priced tools at a fraction of the cost. You can purchase MPE+ as a software only solution, but it is also available preconfigured on a sleek touch-screen field tablet.

iOS® Devices

There's no need to purchase a separate analyzer module or pricey suite to achieve physical and logical acquisition of iOS® devices. MPE+ supports physical image acquisition and logical support of iPhone® (both CDMA and GSM), iPad® and iPod Touch®, without jail breaking the iOS device. Plus you can acquire physical and logical data simultaneously, without the need for iTunes®.

Blackberry®, Android™, Windows Mobile®, Devices

MPE+ supports logical viewing and image acquisition of Android, Windows Mobile and Blackberry devices to include device file systems.

Integrates with FTK®

Analyze mobile devices with MPE+ or bring MPE+ evidence into FTK seamlessly to recover and document files that no other mobile forensics tool can. In addition, this integration allows you to correlate evidence from multiple phones with evidence with multiple computers easily.

Analytics

MPE+ correlates SMS/MMS, Calls and Emails with individual contacts in the phone. The user can tap on SMS/MMS, Calls or Emails from this area and be taken immediately to that data type, only showing the filtered records for that contact.

Generate Customized Reports on Scene

Generate advanced reports to detail phone data, including call history, contacts, messages, photos, voice recordings, video files, calendar, tasks, notes and more.

Securely Email Reports Back to the Lab

With wireless access, a field investigator can securely email customized reports back to the lab.

Making field investigations much easier...

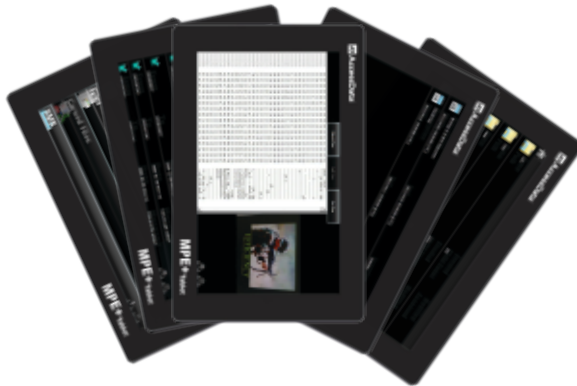

Right Flick: Cycles through views of available data (SMS -> Call History, etc.)

Left Flick: Go back

Up or Down Flick: Scroll content

Pinch with Two Fingers: Zoom out from image in content view

Expand with Two Fingers: zoom in on image in content view
