

Trustwave Security Reporter

The centrally-managed Security Reporter (SR) integrates with the WFR and/or the SWG to manage and store large volumes of data quickly without impacting performance. Whether deployed as a traditional appliance, virtual appliance or both, the SR enables organizations to prove compliance, manage productivity and demonstrate the value of their IT security investment easily.

Benefits

Options to Fit Virtual and/or Traditional Environments

Available as an on-premises appliance, virtual appliance or a combination of both, it gives organizations the flexibility to deploy reporting conveniently and cost effectively.

Ease of Use

The SR requires no additional hardware, software or support resources, so installation and management is a snap. Plus, its intuitive design allows a variety of users to run reports easily and quickly.

Extensive Storage Capacity

With a storage capacity of up to 12 TB, the SR can store data for years, enabling organizations to meet regulatory compliance and legal discovery obligations.

Translates Web Traffic into Actionable Business Information

Pre-set report templates make it easy to analyze thousands of data point combinations and put them into a reporting format that clearly communicates the business impact. All of this is done quickly without any noticeable delay in performance.

Causes No Network Performance Degradation

Processes millions of lines of data without negatively impacting other network systems.

Highlights

Robust, Customizable Reporting

Choose from out-of-the-box templates or customizable reports that can analyze thousands of data combinations precisely. Reports can be scheduled for automatic delivery to various recipients within an organization.

Flexible Deployment Options

Available as an on-premises appliance, virtual appliance or a combination of both, the SR gives organizations the flexibility to deploy reporting conveniently and cost effectively.

Ease of Use

The SR requires no additional hardware, software or support resources, so installation and management is a snap. Plus, its intuitive design allows a variety of users to run reports easily and quickly.

Extensive Storage Capacity

With a storage capacity of up to 12 TB, the SR can store data for years, rather than the typical 30-day limits imposed by competitive reporting solutions. This enables organizations to provide long-term proof of compliance.

Features

C Hardware Compatibility

Virtual appliance works with various hardware that runs VMWare ESXi 4X or higher.

Intuitive Executive Reports

Identify anomalous Web activities quickly through easy-to-read graphical reports.

Custom or “Canned” Reports

Generate “canned” reports using pre-set templates for quick reference, then drill down for more detail and customization.

Detailed Forensic Reporting

Uses detailed drill-down reporting to provide unique criteria that help organizations build compelling forensic reports. User intent is gauged by documenting the URLs visited and the search string used within a search engine text box.

Report Memorization, Scheduling and Distribution

Saves or memorizes specific data inquiries for immediate or future access. Custom reports can be scheduled, executed and automatically distributed via email at a preferred frequency (e.g. daily, weekly, monthly).

Archiving

For large installations or networks that generate significant Web traffic, Trustwave offers attached storage (up to 12 TB) that collects historical data for future inquiries.

Real-time Threat Dashboard

Offers graphical gauge view of online activity, displaying an organizational snapshot of multiple threat categories and top offenders based on predefined thresholds and policies.

Real-time Threat Dashboard

Alert Notification

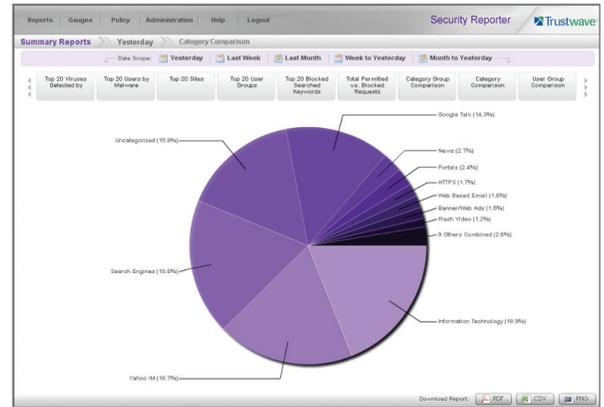

Delivers automatic, predefined notifications via email, SNMP, or as an alarm in the system tray for excessive URL activity or bandwidth usage.

Real-time Remediation

Locks out policy violators or users who engage in potentially threatening activity. The lockout mechanism—activated manually or automatically—can be set to varying levels of restriction, from category lockout to complete quarantine.

Bandwidth Management and Reporting

Provides real-time management and monitoring of inbound and outbound bandwidth activity by protocol, port and user.

Real-time Threat Dashboard

Trend Charting

Displays historical trending of Web activity and bandwidth usage based upon predefined categories or protocols.

Deployment Options

Traditional Appliance

Deployed as an all-in-one, standalone appliance, the SR requires no additional hardware, software or support resources. This minimizes costs and resources.

Virtual Appliance

The SR virtual appliance provides the same level of robust reporting as the traditional appliance, but it deploys as a virtual appliance via VMWare ESXi4—on an organization's hardware of choice. This gives organizations the flexibility to deploy reporting that fits hardware platform requirements, capacity limitations and supported hardware costs.

Combination of Traditional and Virtual Appliance

For organizations that need more than one SR unit, the SR is available in any combination of traditional and virtual appliance options. For example, an enterprise could install a traditional appliance at corporate headquarters and use a virtual appliance at a satellite office that has less space or fewer IT resources.

Trustwave is a leading provider of compliance, Web, application, network and data security solutions delivered through the cloud, managed security services, software and appliances. For organizations faced with today's challenging data security and compliance environment, Trustwave provides a unique approach with comprehensive solutions that include its TrustKeeper® portal and other proprietary security solutions. Trustwave has helped hundreds of thousands of organizations — ranging from Fortune 500 businesses and large financial institutions to small and medium-sized retailers — manage compliance and secure their network infrastructures, data communications and critical information assets. Trustwave is headquartered in Chicago with offices worldwide. For more information: <https://www.trustwave.com>.
